

How to check the water protection?

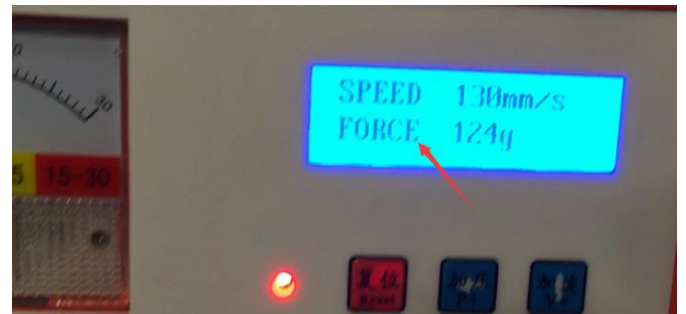

1- When the white button is in Carving Tool. Please press "Selftest", looking the carving knife whether working normally.

2- Please checking the water pipe if is smooth and don't lower the water pump.

3- When the white button is in Laser, please set the force to 100g.

4- Checking the water protection if works normally. Shut OFF the power switch, please clip two black wires and connect the four end of a thread together. So the water protection will still on open condition. Then, turn on the switch and check if have laser.
